Creative Developer driving innovation through experimentalism.

EDUCATION

CSU Monterey Bay | Seaside, CA

Graduated 2022

Bachelor of Science in Biology | Molecular concentration

- CSUMB | Practical Computing for Scientists.
- Harvard | Introduction to Computer Science.
- OpenZepplin | Ethernaut.

SKILLS & TECHNICAL TOOLS

Programming: NextJs, JavaScript React, Node, HTML/CSS, Mongodb, Express, Solidity, Bash, R, Python

Technologies: Github, Figma, Truffle, Ganache, web3.js, Alchemy, Jupyter Notebook, Matplotlib, Pandas, AWS Lambda

PROJECTS

Travel Adventure Website - https://initial-mern.vercel.app/

Constructed an adventure itinerary website using the MERN stack to allow people to explore things to do
in the popular city of Seattle providing a simple way to gauge interest, estimate costs, and find the
location of many great activities. Users can create an account on the website to log their completed
activities allowing for them to sort through what they have already done and find new activities to
experience with a glance.

Oculoplastics Education - *Oculoplasticslearningcenter.com*

• Education focused website detailing various oculofacial conditions and their corresponding treatments with thorough overviews. Features information heavy pages explaining symptoms, causes, treatments, and more wrapped in an easy to navigate website.

Restaurant Website - https://udupbop.netlify.app

Created a website for an Asian Fusion Restaurant. Developed a flexible UI suitable for both web and
mobile view allowing customers to scan the menu, check business information, or place an order.
 Maintained a visually appealing aesthetic in a minimalistic page to highlight the art of the cuisine without
sacrificing any ease of navigation on the page.

Creation and Deployment of Unique ERC-721 Contracts - https://edensflowers.netlify.app

 Created many ERC-721 contracts with unique innovative features: Dynamic, On-Chain, Self-replicating, Burn redemptions. Coded ERC721A contracts for gas efficient bulk minting, ERC-20 token minting contracts, and tailored ERC-721 contracts to suit clients' needs.

On-chain NFT Game - https://shipgame.netlify.app/

Constructed a real time multiplayer battle game utilizing NFTs and game actions which take place entirely
on chain. Players have the ability to customize their NFT stats at mint and then use those stats to battle
each other with destroyed NFTs getting burned and winners gaining rewards.

Twitter automation - (Account deprecated with current twitter api changes)

 Used python to automate Twitter posting of the proportion of Ethereum's market-cap to Bitcoin's using Coinmarketcap's API, as well as to post uniquely generated ASCII art and retweet aesthetic imagery.
